PRODUCT: OASIS NON FERROUS PRIMER

Description : Oasis Non Ferrous Primer is specially developed two pack polyurethane primer for non ferrous substrates like Fiberglass, Aluminium, Galvanised steel, stainless steel, mild steel FRP etc.

Volume Solids (%) : 44±2

Flash Point : Above 25°C

Specific Gravity (Kg/Ltr) : 1.3 to 1.4 (May vary with shade)

Colours : Red Oxide, Grey & White

Pack Size : 5 litre

Theoretical Spread Rate (m²/Ltr) : 8.8 m²/Ltr

@ Dry Film Thickness Microns per coat : 50 Airless Spray

@ Wet Film Thickness Microns per Coat : 114

Spreading rates are calculated and due allowance for loss and wastage should be made.

Drying Time @ temperature : 15°C 25°C 35°C
To Touch : 3 Hrs 2 Hrs 1 Hr
To Overcoat (Minimum) : 16 Hrs 14 Hrs 12 Hrs
These figures are given as a guide only. Factors such as air movement and humidity must also be considered.

Cleanser or Thinner : Thinner # 9

Application Notes : Ready to use. However depends on site condition, maximum dilution recommended is 10%.

Application Methods : Conventional, airless spray, Brush or Roller

Recommended Topcoat : Oasis non ferrous primer may be over coated with most conventional coatings, chlorinated and acrylated rubbers, vinyls, epoxies and polyurethene paints.

Shelf Life : Minimum 1 year

Mixing Ratio : 5 parts base to 3 parts additive by volume

SAFETY, HEALTH & ENVIRONMENTAL INFORMATION - (READ THIS SECTION BEFORE USE)

- Flammable. Keep away from sources of ignition. Do not smoke.
- Work only in areas of good ventilation. When used indoors always keep doors and windows fully open during application and drying. When applying for short periods only, a suitable cartridge mask may be worn provided the filter is changed regularly. All respiratory equipment must be suitable for the purpose and meet an appropriate standard approved by the HSE. Refer to your COSSH Assessment.
- When applying paint it is advisable to wear suitable eye protection. In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.
- Keep container tightly closed and keep out of reach of children. Do not use or store by hanging on a hook. Do not empty into wadis, drains or watercourses.
- Contains no added mercury.

TECHNICAL DATA

SURFACE PREPARATION:
Prepare surfaces to a minimum standard of St 3 BS 7079: Part A1: 1989 at the time of coating. Ensure surfaces to be coated are dry and free from all traces of surface contaminants.
For application onto stainless steel substrates, the surface should be degreased and wherever practical, blast cleaned to Sa 2½ BS 7079: Part A1: 1989 (ISO 8501-1: 1988).

APPLICATION EQUIPMENT:

Airless Spray
- Nozzle Size: 0.46mm (18 thou)
- Fan Angle: 40°
- Operating Pressure: 155kg/cm² (2200psi)

Conventional Spray
- Nozzle Size: 1.27mm (50 thou)
- Atomising Pressure: 2.8kg/cm² (40 psi)
- Fluid Pressure: 0.4kg/cm² (6 psi)

Brush and Roller
The material is suitable for brush and roller application. Application of more than one coat may be required to give the equivalent dry film thickness to one spray applied coat.

APPLICATION CONDITIONS AND OVERCOATING:
In conditions of high relative humidity, i.e. 80-85%, good ventilation is essential. Substrate temperature should be at least 3°C above the dew point. At application temperatures below 10°C, drying times will be significantly extended and spraying characteristics may be impaired. Application at temperatures below 5°C is not recommended. In order to achieve optimum water and chemical resistance the temperature needs to be maintained above 10°C whilst curing. For application at elevated temperatures, please see the note below.

ADDITIONAL NOTES:
Drying, curing times should be considered as a guide only. For spraying maximum 5 to 10% dilution is recommended.

Coatings - Tropical Use
To ensure a satisfactory working pot life, the temperature of Oasis Non Ferrous Primer should not exceed 35°C at the time of mixing. Thinning the mixed product at any stage will not significantly extend the working pot life. Application outside the working pot life, even if the material appears to be fit for use, may result in inferior adhesion properties. The recommended maximum air and substrate temperature for the application of epoxies is 45°C, providing that the conditions allow for satisfactory application and film formation. If the air and substrate temperatures exceed 45°C during application, paint film defects such as dry spray, bubbling and pinholing etc. may occur. Numerical values quoted for physical data may vary slightly on individual batches.

HEALTH AND SAFETY:
Consult Product Health & Safety Data Sheet for information on safe handling and application of this product.
